Test Strategy

Test Objective:-

Here we are preparing a test strategy document for the Swag Labs to know functionality and User interface(UI) to deliver a quality product.

Approach:-

Here our approach is to check Swag Labs application to validate and verify its functionality and UI/UX to make sure it fits for the users. We check the application with testing methodology and tools. We will check the application with manual testing. Here our approach is to test functional features in such a way that having more/full coverage of the application with less number of test cases.

Testing Types:-

Since the objective is to test the functionality of the webpage we will do UI functionality testing, Usability testing and End to End testing.

Scope:-

In-Scope

Testing the functionality of the website including links, buttons pages and features. The test will cover the user interface off the website to ensure it is user friendly.

OutScope

Sign-Up
Reset App State
Regression testing
Sanity testing

Tools And Technology:-   NA

Testing Environment:-

Testing will be performed on web browsers chrome latest version.

Test Data:-

Using the test data Such as sample user accounts, sample products and sample payment information to perform the test scenarios.

Test Deliverables:-

Mindmap, Test Case document and Test Execution report.
